Bank and Payment Accounts Monitoring System
Deployment and maintenance instructions for the Bank
and Payment Accounts Register

29 May 2026
1 Purpose of the instructions

The purpose of these instructions is to provide guidance to data suppliers on deploying and maintaining a bank and payment accounts register, that is, the Accounts Register.

These instructions are supplemented by [the update interface description of the Accounts Register](#).

2 Glossary and abbreviations

Term	Description
Bank and Payment Accounts Monitoring System	The national Bank and Payment Accounts Monitoring System is based on the Finnish Act on the Bank and Payment Accounts Monitoring System (571/2019) and on Directive (EU) 2018/843 of the European Parliament and of the Council on the prevention of the use of the financial system for the purposes of money laundering or terrorist financing. In accordance with the legal amendment 863/2025, The Bank and Payment Accounts Monitoring System is composed of a centralised automated account information system and a centralised electronic account balance and transaction information system.
Bank and Payment Accounts Register (Accounts Register)	The Bank and Payment Accounts Register (Accounts Register) is a system created by Finnish Customs that receives and stores the data referred to in the Act on the Bank and Payment Accounts Monitoring System. The Accounts Register consists of the Accounts Register application and its update and query interfaces. The Accounts Register is based on the Act on the Bank and Payment Accounts Monitoring System (571/2019) and on Directive (EU) 2018/843 of the European Parliament and of the Council of 30 May 2018 on the prevention of the use of the financial system for the purposes of money laundering or terrorist financing.
Data retrieval system	Data retrieval system refers to the digital bank and payment accounts data retrieval system maintained by a data supplier. It enables data suppliers to transmit data on their customers and customers' account balance and transaction information referred to in chapters 2 and 3 of the Act on the Bank and Payment Accounts Monitoring System, notwithstanding any secrecy provisions, to the competent authority. Data suppliers implement their own data retrieval systems, which means that there are several data retrieval systems. Finnish Customs determines the technical requirements for the data retrieval system.

Bank and Payment Accounts Monitoring System
Deployment and maintenance instructions for the Bank
and Payment Accounts Register

29 May 2026

Term	Description
Controller	The Act on the Bank and Payment Accounts Monitoring System establishes Finnish Customs as the controller of the Accounts Register.
Data supplier	Data supplier refers to a payment institution, electronic money institution or crypto-asset service providers that submits data specified in the Act on the Bank and Payment Accounts Monitoring System to the Accounts Register maintained by Finnish Customs through the update interface, or that transmits such data through its own data retrieval system. Data supplier also refers to a Finnish branch office of a foreign payment institution, electronic money institution, credit institution or crypto-asset service provider.
Update interface	Update interface refers to the interface defined and created by Finnish Customs through which data suppliers can send information to the Accounts Register. There is a separate interface description of the Accounts Register update interface.
Data user	Data user is the competent authority or bar association specified in The Act on the Bank and Payment Accounts Monitoring System that are authorised to submit enquiries to the Accounts Register. Competence is specified in the up-to-date legislation.
Testing	Data suppliers must carry out testing when they start using the Accounts Register. Finnish Customs maintains a test environment for testing the Accounts Register. It is available to data suppliers for testing with test data. Data suppliers are responsible for creating the test material.
Maintenance	Maintenance refers to tasks entrusted with the controller of the Accounts Register (Finnish Customs), such as service level control relating to the Accounts Register, user support, disruption management, troubleshooting, access management as well as version and change management.

3 Background and coverage

According to Directive (EU) 2018/843 of the European Parliament and Council, Member States are required to establish centralised automated mechanisms for accessing national information on the identity of holders of bank and payment accounts and safe-deposit boxes. Consequently, Finland has approved a national Act on the Bank and Payment Accounts Monitoring System (571/2019).

Bank and Payment Accounts Monitoring System 29 May 2026
Deployment and maintenance instructions for the Bank
and Payment Accounts Register

In accordance with the legal amendment 863/2025, The Bank and Payment Accounts Monitoring System is composed of a centralised automated account information system and centralised electronic system for account balance and transaction information.

A centralised automated account information system refers to a centralised automated mechanism in accordance with Directive (EU) 2018/843 of the European Parliament and Council, allowing for immediate access to data on bank and payment accounts data as well as safe-deposit boxes. A centralised electronic account balance and transaction information system refers to a EDP-based way to process account balance and transaction information from the Bank and Payment Accounts Monitoring System as well as securities information.

The purpose of the Bank and Payment Accounts Monitoring System is to facilitate authorities' automated access to information regarding bank and payment accounts as well as safe-deposit boxes, to facilitate authorities' electronic access to account balance and transaction information and securities information as well as to improve the data security for the personal data to be supplied.

Personal data in the Bank and Payment Accounts Monitoring System are processed using the following:

- a bank and payment accounts data retrieval system
- the Bank and Payment Accounts Register (Accounts Register)
- a data disclosure system
- an aggregating application.

Through an electronic system, data can be accessed considerably faster than manually. Migrating to an electronic data transmission system will also enhance the data protection of businesses and citizens alike, because log data concerning all electronic data processing will be recorded in the centralised log file system of the Accounts Register. Another aim is to improve the data quality. Manual collection of data poses a greater risk of errors than what would occur in an automated process. In other words, data retrieved through the Bank and Payment Accounts Monitoring System are more reliable and accurate.

4 Introduction of the Accounts Register

The Bank and Payment Accounts Register (Accounts Register) is a register where the following data are collected: data on the bank and payment account customers of payment institutions and electronic money institutions as well as of credit institutions exempted by the Finnish Financial Supervisory Authority, as well as data on the customers of crypto-asset service providers.

The Accounts Register is a register created and maintained by Finnish Customs. Instead of processing data on behalf of the controller or outsourcing the data processing, the Accounts Register is used to disclose data from the register on grounds provided for in the Act on the Bank and Payment Accounts Monitoring System directly to the competent authorities under conditions provided by law.

Account balance and transaction information in accordance with Chapter 3 of the Act on the Bank and Payment Accounts Monitoring System are not stored in the register. The operators storing data in the Accounts Register who have not built a data retrieval system supply account balance and transaction information the data disclosure system maintained by Finnish Customs.

Oversight of legality can also be carried out in the Accounts Register, as Finnish Customs keeps records of the enquiries by competent authorities.

Bank and Payment Accounts Monitoring System 29 May 2026
Deployment and maintenance instructions for the Bank
and Payment Accounts Register**4.1 Data in the Accounts Register**

The Bank and Payment Accounts Register (Accounts Register) receives and stores the data referred to in section 6 of the Act on the Bank and Payment Accounts Monitoring System.

Submission of such data to the Accounts Register has been required since its deployment on 1 September 2020. If the business operations subject to the reporting obligation started after that date, the data must be transmitted from the start date of the business operations.

4.2 Role and responsibilities of Finnish Customs

Finnish Customs has the right provided for in the Act on the Bank and Payment Accounts Monitoring System to issue more detailed regulations on the electronic procedures and the means of certification to be used when supplying the data to the Accounts Register.

Customs' technical responsibilities are directly derived from the legislation concerning the Accounts Register.

According to the Act on the Bank and Payment Accounts Monitoring System, Customs acts as the controller of the Accounts Register. The controller is obligated to prove that the requirements set out in the EU's General Data Protection Regulation (GDPR) (2016/679) and the Finnish Data Protection Act (5.12.2018/1050) are complied with in data processing.

Customs is not responsible for any third-party material linked to this instruction or to the technical requirements or for the functionality of the links.

4.3 Responsibilities of data suppliers

As controllers referred to in the GDPR (2016/679) and the national Data Protection Act (5.12.2018/1050), data suppliers will update data to the Accounts Register as provided for by the GDPR, the Data Protection Act and these instructions, with care and with expertise required by their tasks.

Data suppliers must ensure that their equipment, software, systems or data connections used for the updating of data will not cause any damage, disturbance or other inconvenience to Finnish Customs or to third parties, such as to the rights of the data subjects.

Data suppliers may not implement any system changes that will have an effect on the Regulation issued by Customs on the Accounts Register or that will prevent or impede the operation or functionality of the Accounts Register defined by law or the integrity, accuracy and availability of its data content.

Each data supplier must appoint a contact person in their organisation who will be the first point of contact for Customs regarding deployment and maintenance of the Accounts Register.

4.3.1 Responsibility for correctness of data

Data suppliers are responsible for

- the accuracy and correctness of the data in their individual registers
- the correctness of the data they supply to the Accounts Register
- amending these data without undue delay.

If any errors are observed in submitted data, the data supplier must immediately submit amended data.

Bank and Payment Accounts Monitoring System
Deployment and maintenance instructions for the Bank
and Payment Accounts Register

29 May 2026

Data suppliers must also notify Finnish Customs of any suspicions of incorrect or contested data. Once such suspicions are cleared up, data suppliers must immediately notify whether the suspicions were unfounded or not, and they must submit any amended data.

See the update interface description of the Accounts Register for more specific guidance on how to notify Customs of any incorrect or contested data.

4.4 Operators and roles

Competent authorities and the bar association are the data users of the query interface of the Accounts Register.

Credit institutions, payment institutions, electronic money institutions and crypto-asset service providers are data suppliers. Data suppliers use the update interface of the Accounts Register.

Table 1 Operators and roles relating to the Accounts Register

Operators	Suppliers of data to the update interface of the Accounts Register	Users of data in the query interface of the Accounts Register
Competent authorities and the bar association		X
Credit institutions	B	
Payment institutions	A	
Electronic money institutions	A	
Crypto-asset service providers	A	

X) always

A) as a rule

B) by exception

5 Submitting data to the Account Register

The data supplier sends update messages to the Finnish Customs interface in order to fulfil their the legal obligation to supply data.

All data suppliers use the message structure and data content that Customs has specified. The update interface will be implemented using the REST/JSON method. The data message structure must be implemented according to the interface description specified by Customs.

The parties obliged to supply data are divided into two categories:

- category 1: credit institutions
- category 2: payment institutions, electronic money institutions and crypto-asset service providers

Bank and Payment Accounts Monitoring System
Deployment and maintenance instructions for the Bank
and Payment Accounts Register**29 May 2026**

The use cases of these categories are described in more detail in the Accounts Register interface description.

At the first update, all data valid on 1 September 2020 is to be submitted to the Accounts Register. If the business operations started after 1 September 2020, the data must be transmitted from the start date of the business operations. After this, upon following updates, only updated or new data are to be provided.

Data suppliers must submit a message on updated and new data to the Accounts Register no later than by 6.00 am on the following banking day.

The maximum permitted message size is 50 kB. Any material larger than this must be submitted as separate consecutive messages.

For technical instructions, interfaces and schema descriptions concerning the Accounts Register, see the update interface description of the Accounts Register.

6 Regulation and notification procedure

Finnish Customs has the right to issue regulations concerning the Accounts Register.

Data suppliers must contact Customs about joining the Accounts Register and supplying data.

After being contacted by a data supplier, Customs will provide instructions for joining the Accounts Register and starting to supply data. Upon deployment, Customs will go through the instructions for joining the update interface with the data supplier and draft the required documentation. After this, Customs and the data supplier will determine a schedule and define the approval criteria for deploying the update interface.

In unclear situations, you will receive further instructions and support from Customs. You can contact Customs by email to tilirekisteri@tulli.fi.

Data suppliers can implement their own data retrieval systems or switch from the Accounts Register to a data retrieval system. A free-form notification of the implementation of a data retrieval system must be sent to Customs by email to tilirekisteri@tulli.fi. Customs will then send instructions for creating a data retrieval system.

7 Data security

Data suppliers have an obligation to notify Customs without delay of any data security incidents and threats related to the Accounts Register.

Data suppliers must maintain log data of the update messages and store them in case of data security incidents. However, the actual data content of the update messages must not be saved in the log.

7.1 Data security – general

As the controller, Customs is responsible for the data security of the Accounts Register. All data collected in the Accounts Register is stored in accordance with the legislation in force. By various administrative and technical measures, Customs aims to prevent and minimise data security threats concerning unauthorised access to the Accounts Register data.

Data suppliers are responsible for

- the data security of their own data
- the data security of their own systems and connections.

Bank and Payment Accounts Monitoring System 29 May 2026
Deployment and maintenance instructions for the Bank
and Payment Accounts Register

- for the data security of the systems and connections of any third party they use.

The connections of the Accounts Register update interface are protected by TLS encryption. The detailed requirements for creating and securing connections are specified in the description of the Accounts Register update interface. With regard to certificates, please note that the cryptographic strength requirements concerning protection of the connections described in the update interface description also apply to the actual certificates.

The update message contents are signed as JWT records using signature certificates. Signature certificates are described in detail in section 7.2 of these instructions as well as in the update interface description, which also contains a more detailed description of the structure of update messages.

The metadata of the update messages of the Accounts Register update interface are stored in Customs' centralised log data system for the time period required by legislation.

Customs is responsible for ensuring that a data security audit is carried out concerning the Accounts Register and the related interfaces. The auditing is based on the audit criteria used by central government as well as on commonly used standards related to application and platform security. The following criteria are used in the auditing, where applicable:

- Data security of the environment platforms (CIS Level 1)
- Data security of the selected applications (OWASP ASVS Level 2)
- Data security of the network (KATAKRI)
- Architecture (KATAKRI).

7.2 Certificates

In the Accounts Register, external connections are secured through certificates. Messages sent to the Accounts Register must be automatically signed (electronically stamped) in the sending system to enable authentication of the origin and integrity of the messages. The Accounts Register also adds signatures to the messages it sends.

Data suppliers must notify Customs of the certificates they use. The certificates must comply with the instructions issued by Customs. Data suppliers must obtain server and system signature certificates that meet the certificate requirements and install the certificates in their systems. Technically, an individual certificate can be used as both a server and a system signature certificates, or the certificates can be separate.

If a private key related to a certificate is revealed or it is suspected that the key has fallen into the wrong hands, the certificate holder must see to that the certificate is immediately revoked and that Customs is notified of this without delay. Correspondingly, if a certificate is accidentally or fraudulently granted to an incorrect party, the correct certificate subject must see to that the certificate is revoked and that Customs is notified of this immediately after the matter has come to light.

7.3 Applying for certificates and ensuing costs

Certificates are to be applied for by the party that generates and sends updates to the Accounts Register:

- If the data supplier performs these steps itself, the certificate will be applied for for the data supplier.

Bank and Payment Accounts Monitoring System**29 May 2026**Deployment and maintenance instructions for the Bank
and Payment Accounts Register

- If a service provider is used for generating and transmitting messages on behalf of the party obliged to provide data, the server certificate will be applied for by the service provider. In such cases, the party obliged to provide data must authorise the service provider to automatically sign messages to be sent.

Be sure to check the description of the Account Register update interface for up-to-date certificate requirements.

More information on electronic trust services and service providers is available on the website of the [National Cyber Security Center](#).

7.4 Renewal of certificates

Data suppliers must renew their certificates in good time before they expire. An expired certificate cannot be used.

A new or renewed certificate is to be submitted to Customs no later than one month before the deployment of the certificate, unless otherwise agreed with Customs. Send the certificate to Customs by email to tilirekisteri@tulli.fi.

Customs must also renew the certificate for The Accounts Register on a regular basis with the certificate provider. Customs will notify of the time for renewal of certificates. The use of the connection may be interrupted due to a change of the certificate for the Accounts Register if a change (should one be required) is not made simultaneously in the data supplier's system. The validity of the Accounts Register server certificates can be checked from the certificate directory of the Digital and Population Data Services Agency (DVV).

Data suppliers are responsible for the costs relating to the certificates they use, because according to section 1 f of the Act on the Bank and Payment Accounts Monitoring System, Customs has the right to obtain data to be stored in the Accounts Register free of charge.

8 Stages of deployment

The deployment of the Accounts Register includes installation of server certificates, testing, opening data connections, and deployment approval.

Data suppliers are responsible for their own applications, services and data connections with the Customs update interface, and for the ensuing costs to their own organisations or to any third parties whose services may be required for the deployment.

8.1 Testing

Customs maintains a test environment for testing the Accounts Register, and data suppliers joining the Accounts Register can run tests against this test environment.

Customs coordinates the testing in cooperation with data suppliers. Data suppliers are responsible for creating the test material (update messages). The test material must not contain any real data, such as names or account information on natural persons.

Testing serves to ensure the functionality of at least those file types that data suppliers will be sending to the Accounts Register in production.

Before starting production use, the functionality of the connections in production is ensured.

8.2 Approval

Once the deployment-related tasks by the data supplier have been carried out and tested, Customs approves the move into production with a written notification, and the data supplier moves into the use and maintenance stage of the Accounts Register.

Bank and Payment Accounts Monitoring System
Deployment and maintenance instructions for the Bank
and Payment Accounts Register**29 May 2026****9 Maintenance**

Maintenance of the Accounts Register covers

- service level management
- Accounts Register support provided by Customs
- incident, issue and change management
- version and configuration management of the Accounts Register.

Each data supplier must appoint a contact person in their organisation for maintenance. Customs will inform the contact person of any changes to the service.

9.1 Service level

The update interface is available to the data suppliers 24/7/365, with 99.5 per cent availability. The fulfilment of the availability requirement is calculated as an average for each calendar month.

Users will be notified in advance of maintenance breaks, which are scheduled at 00.00–06.00.

Customs has the right to make changes to the availability requirements. Data suppliers will be notified in advance of any changes.

9.2 Disruptions

Data suppliers and Customs, to the extent they are responsible, are obligated to inform other concerned parties of any malfunctions in their service that affect the functionality of the update interface.

Data suppliers must also inform Customs of any planned maintenance and downtime that may affect the update interface or the supply of data to Customs. Data suppliers must inform Customs immediately of any malfunctions.

9.3 Change management

As the administrator of the Register, Customs oversees changes and has the legal right to decide on and issue regulations on changes.

Customs reserves the right to change the content, execution and availability of the Accounts Register. Customs also has the right to suspend the Accounts Register update interface for maintenance and updates. Customs will notify the data suppliers of any changes, especially if they involve changes affecting the use of the update interface, in order to minimise any negative impact on the operation of the interface.

Customs is not responsible for any inconvenience, costs or indirect damage due to loss of data or delays caused by any interruptions or disruptions in the system.

Customs updates its website with any interface status changes. Customs also directly notifies the contact persons appointed by data suppliers of any changes.

9.4 Version and configuration management

Version management entails management of major changes, whereas configuration management refers to smaller measures, such as modification of settings. These measures are carried out according to the standard procedures set out by Customs.

The table below describes the statuses of a specific interface version.

Bank and Payment Accounts Monitoring System
Deployment and maintenance instructions for the Bank
and Payment Accounts Register**29 May 2026****Table 2** *Interface statuses*

Status	Meaning
Draft	Published and available, but the interface may change
Active	Interface change management practices operational
Deprecated	Interface in production use, but being phased out, new implementations no longer permitted.

9.5 Access management

Customs is responsible for granting data suppliers' organisations access rights to the update interface as well as for access rights required for technical maintenance.

9.6 Time zone

The Accounts Register uses Eastern European Time, which is used in Finland. Please note however, that you will receive the response messages in Greenwich Mean Time.

9.7 Support provided by Customs

Customs provides support regarding the deployment, operational models and contents of the Accounts Register.

- Please first check the guidance on the Customs website: [Bank and Payment Accounts Monitoring System](#)
- You can also contact Customs by email: tilirekisteri@tulli.fi. If a data supplier has any technical problems, questions or suggestions for changes regarding the Accounts Register interface or its contents, they can submit a support request to Customs by email.

The contact person assigned by the data supplier is the primary person to contact Customs.
